

"For" Loops

Loops are used for iteration

A for loop has an initialization; a continuation-condition; an update; and a body

```
for( i=0; i<10; i++)  
{  
    printf("%d", i);  
}
```

Processing goes : initialization; check continuation-condition; update;

Body

Brackets are optional if the body has only one statement

Example:

A loop to print out the whole numbers from 10 down to 0:

A loop to print out the 26 letters of the alphabet:
