

Practice 3: Variable arithmetic

1) I have a floating point number. How to extract the fractional part?
(Note that `value % 1` does not work.)

```
float value;  
...
```

2) I have a character (guaranteed to be upper case letter). I want to increment with wrap around. That is, A goes to B, B goes to C, and eventually Z goes to A. (Hint: the modulus operator.)

```
char cc;  
...
```
