Fall 2005
Homework 4 - Metamers

Due: Tuesday, 11/22/2005

For the color spectrum shown below, determine the (R, G, B) values in the range [0.0, 1.0] that would produce a metamer of the color represented. In other words, what color is it? Assume standard NTSC phosphors with "white" defined as CIE illuminant C.

The CIE matching functions are available on the web page.

Please show all of your work in arriving at the final answer. Also, print out a block of the corresponding color on a color printer, or create a webpage with a swatch of the final color (include the link on your assignment).
